

DALI manufacturing campus, Jinjiang, Fujian, China

DALI ENTERPRISE

Apparel & textile manufacturing for brands and retailers

Established in 1986. Materials, development and manufacturing across China and Cambodia.

180M pieces/year	10,000+	329+	100+
Group capacity: China and Cambodia combined	Employees across the group	Production lines across the network	Brands served

MANUFACTURING NETWORK

Manufacturing in China and Cambodia

Material and finished-product operations support the development and production of brand and retail programs.

Garment production, Jinjiang, China

Garment workshop, Cambodia Factory II

China

The network includes Jinjiang headquarters and garment operations, fabric and dyeing operations in Fujian, elastic production in Jinjiang and sock manufacturing in Jiangsu.

Cambodia

Established in 2015, the Cambodia network includes three existing factories: Factory I and Factory II for garments, and Factory V for socks.

New campus: trial production

The new Cambodia campus has entered trial production and is not yet in full operation (confirmed 19 October 2026). It is separate from the three existing factories. Expansion targets are not added to current group capacity; production availability is reviewed for the actual project.

INTEGRATED CAPABILITIES

From materials to finished products

Design and R&D in Jinjiang connect fabric, dyeing, elastics and garment development with the sample and production specification.

Fabric & dyeing

Construction, color, finishing and material requirements.

Elastics & trims

Waistbands, straps and garment components.

Sock manufacturing

Knitting, finishing, inspection and retail pair packs.

Garment manufacturing, Jinjiang. Materials and construction are reviewed against the same product reference.

QUALITY & SUPPLIER REVIEW

Quality at material and finished-product stages

Approved specifications and samples guide material evaluation, production checks and final sampling inspection.

DALI textile laboratory, Fujian, China

Sock inspection workshop, Jiangsu, China

Testing and inspection

Testing support includes colorfastness, pH, shrinkage, dimensional stability and bursting strength. In-process checks and final sampling inspection follow the agreed product requirements.

Factory, management-system and textile-documentation portfolio

Audits, management systems, material certificates and product tests have different scopes. Confirm the named entity, site, document dates and coverage for the proposed order.

RESPONSIBLE MANUFACTURING

People, materials and manufacturing practice

Workplace commitments, training and material records are part of a supplier review, alongside product and production requirements.

DALI training centre and team

Adult recruitment

Minimum employment age of 18; no child labor.

Voluntary employment

A commitment to voluntary employment and no forced labor.

Fair wages

Fair pay above the applicable legal minimum.

Employee support

On-site healthcare at facilities with an operating medical clinic.

Site security

24-hour site security; site-specific safety records are reviewed separately.

Training

Personnel development and continuous improvement through the training centre.

Material documentation is reviewed for the specified fabric or trim. The new Cambodia campus is in trial production, not full operation (confirmed 19 October 2026). Solar power and energy storage remain planned facilities, not verified operating results.

BRAND & RETAIL EXPERIENCE

Experience with international brands and retail programs

Product development, brand presentation and retail-pack requirements are considered together for the agreed program.

Selected brand and retail references

Production workshop, Jinjiang, China

Material development, garment construction, labels and packing requirements are coordinated for the agreed product. A shared specification connects development decisions with manufacturing and retail presentation.

DEVELOPMENT & SUPPLY

From development to bulk supply

A designated contact coordinates product questions, production review and communication with the manufacturing operation.

01 Feasibility & next steps

DALI reviews the product and bulk requirement, then identifies material questions, sample objectives and quotation inputs.

02 Development & approval

Technical teams connect materials, construction, fit and trims with sample revisions and the approved production reference.

03 Progress & inspection

ERP-supported tracking, agreed weekly reporting and inspection review connect current status with open actions.

04 Packing & shipment

Coordinate quantities, selling units, carton instructions and required shipment documents.

Production preparation, Cambodia

International supply experience

Exports to more than 30 countries. Selected destinations include the United States, Canada, the United Kingdom, Germany, France, Italy, Spain, Belgium, Australia, Japan, Chile and Peru.

DALI focuses on bulk brand and retail programs, not small production orders. Sampling supports a proposed bulk program. Minimum quantities, commercial terms and schedules are agreed for the order.

START A MANUFACTURING DISCUSSION

Discuss your next manufacturing program.

Tell us what your team is planning. The relevant product and manufacturing team can review the available information and identify the next questions.
